

Environmental Management Policy

TIMG identifies the importance of maintaining a high standard of environmental attention in all operations and activities and maintain a balance between environmental, technical and economic objectives.

TIMG is committed to:

- Conducting operations in accordance with environmental legislation, regulations and codes of practice.
- Improving the environmental performance of operations by identifying and managing risks and by monitoring improvements.
- Minimising environmental impact.
- Informing our clients of our aims and communicating with the community and organisations concerning the potential environmental impact of our activities.
- Encouraging employees, sub-contractors to operate in an environmentally responsible manner and adhere to our environmental policies.

We set targets for carbon emissions, energy use, as well as set mandatory environmental standards for incorporating sustainability.

We support these commitments to reduce our impact on the environment and to adopt practices that use resources sustainably.

These objectives are outlined in our comprehensive Environmental Management, which also includes accountabilities and actions to drive performance.

The environmental management issues covered include:

- Energy Use
- Greenhouse gas emissions [CO₂]
- Suppliers, products and materials use
- Office waste, building waste and resource recovery

TIMG is committed to continuous improvement of environmental policies, planning, operations, objectives and targets.
